

Unit 04: Teacher-Centered Methods

4.1 Direct Instruction

Meaning

Direct instruction is a structured, systematic teaching method in which the teacher clearly explains the content step-by-step and students follow the guidance.

Characteristics

- Teacher-centered approach
- Clear learning objectives
- Sequential presentation
- Immediate feedback
- Practice and reinforcement

Steps of Direct Instruction

1. **Introduction** – Motivate students and state objectives
2. **Presentation** – Explain new content clearly
3. **Guided Practice** – Practice with teacher support
4. **Independent Practice** – Students practice individually
5. **Evaluation/Closure** – Check understanding and summarize

Advantages

- Ensures clarity and accuracy
- Suitable for large classes
- Saves time
- Effective for teaching new or complex concepts

Limitations

- Less student participation
- Focuses more on memorization

4.2 Concept Teaching

Meaning

Concept teaching is a method used to help students understand the meaning and characteristics of a concept through examples and non-examples.

Purpose

- Develop clear understanding
- Avoid misconceptions
- Build logical thinking

Steps in Concept Teaching

1. Define the concept
2. Present positive examples
3. Present negative examples (non-examples)
4. Identify essential attributes
5. Provide practice

Example

Teaching the concept of “Triangle”

- Examples: Shapes with three sides
- Non-examples: Circle, Square
- Essential attribute: Three sides and three angles

Advantages

- Develops deep understanding
- Improves analytical skill
- Reduces confusion

4.3 Presenting and Explaining

Meaning

Presenting and explaining is a teacher-centered method where the teacher delivers information orally and explains ideas clearly and logically.

Features

- Lecture method
- One-way communication
- Use of blackboard and teaching aids
- Question-answer for clarification

When to Use

- Teaching theoretical subjects
- Explaining historical events
- Teaching formulas and rules

Effective Presentation Requires

- Clear voice
- Logical sequence
- Use of examples
- Eye contact
- Summary at the end

Advantages

- Covers syllabus quickly
- Maintains discipline
- Ensures accurate information

4.4 Preparation of Sample Lesson Plan (Teacher-Centered Method)

Sample Lesson Plan

Subject: Mathematics

Class: 7

Topic: Simple Interest

Duration: 45 Minutes

Objectives

Students will be able to:

- Define simple interest

- Write the formula
- Solve numerical problems

Teaching Materials

- Blackboard
- Marker
- Textbook

Teaching Procedure

1. Introduction (5 minutes)

- Ask: “What is interest in a bank?”
- State objectives.

2. Presentation (20 minutes)

- Define Simple Interest.
- Write formula on board:
$$SI = (P \times T \times R) / 100$$
- Explain each term (P, T, R).
- Solve one example on board.

3. Guided Practice (10 minutes)

- Solve another example with student help.

4. Independent Practice (5 minutes)

- Students solve one problem individually.

5. Evaluation and Closure (5 minutes)

- Ask short questions.
- Summarize formula.
- Give homework.
